Discussion 8: Loop invariants

Task 1

Precondition:

Invariant:

Loop template

```
/* A: loop initialization */  
  
// inv: loop invariant (e.g. c[0..k) == 0)  
while ( /* B: loop guard */ ) {  
    /* C: loop body */  
}
```

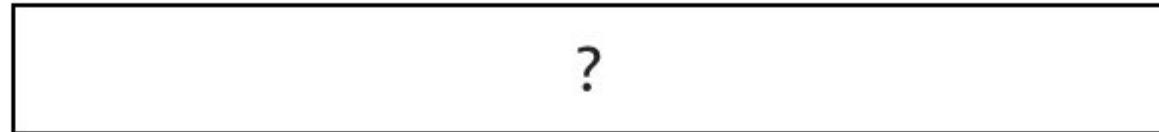

Dutch National Flag

- Problem proposed by **Edsger Dijkstra**, a foundational computer scientist
 - His "shortest path algorithm" will feature prominently later in the course

Task 2

Precondition:

\emptyset	$f.length$
$f:$ 	$?$

Postcondition:

\emptyset	$f.length$
$f:$ 	

Loop template

```
/* A: loop initialization */  
  
// inv: loop invariant  
while ( /* B: loop guard */ ) {  
    /* C: loop body */  
}
```
