# Announcements.

\* HW1 Due

\* HW2 Out Today

\* Prelim #1

↳ Next Thurs. 13 Feb 7:30-9p.

↳ Closed Note, Closed Internet.

\* Review Session

↳ Saturday Recitation

↳ Next Tues. 11 Feb 7-9p

Gates 601

Friday

\* Guest Lecture by Prof. Bobby Kleinberg

\* Prof. Kim's OH moved to Monday.

# Edit Distance

Given two strings  $S$ ,  $T$

Find minimum sequence of edits  
to turn  $S$  into  $T$

---

$S =$  CRYPTOGRAPHY

$T =$  ENCRYPTING

---

What do we know about  
the optimal solution?

# Edit Distance

Given two strings  $S, T$

Find minimum sequence of edits  
to turn  $S$  into  $T$

---

$S =$             C R Y P T O G R A P H Y  
                  . . . . .  
 $T =$             E N C R Y P T I N G

---

Fact 2. In every sequence of edits,  
each character in  $T$  is either

- \* Added

- \* Changed/Aligned from  $S$

Fact 1 + Fact 2  $\Rightarrow$  Exhaustive Case Analysis

Cases

\*  $S_n$  is deleted

\*  $T_m$  is added

\* At least one of them is aligned/changed.

---

Fact 1 + Fact 2  $\Rightarrow$  Exhaustive Case Analysis

$S_n$  deleted

DP Recurrence

Edit Distance  
between  $S$  and  $T$

= min

$\delta +$

Edit distance  
between  $S[1:n-1]$  and  $T$

$\delta +$

Edit distance  
between  $S$  and  $T[1:m-1]$

$\Delta_{S_n T_m} +$

Edit distance  
between  $S[1:n-1]$  and  
 $T[1:m-1]$

Correctness. Consider the recurrence ED given as

$$ED(n, m) = \min \left\{ \begin{array}{l} ED(n-1, m-1) + \Delta_{S_n T_m} \\ ED(n-1, m) + \gamma \\ ED(n, m-1) + \gamma \end{array} \right\}$$

where

$$ED(0, 0) = 0, \quad ED(1, 0) = \gamma, \quad ED(0, 1) = \gamma.$$

---

Theorem.

For any  $n, m \in \mathbb{N}$ . Suppose  $|S| = n, |T| = m$ .

$$\boxed{\begin{array}{l} \text{Edit Distance} \\ \text{between } S \text{ and } T \end{array}} = ED(n, m).$$

# Edit Distance Algorithm

$$ED(0,0) = 0$$

$$ED(i,0) = i \cdot \gamma$$

$$ED(0,j) = j \cdot \gamma$$

For  $i = 1 \rightarrow n$

For  $j = 1 \rightarrow m$

$$ED(i,j) = \min \left\{ \begin{array}{l} ED(i-1,j-1) \\ + \Delta_{s_i T_j} \end{array} , \begin{array}{l} ED(i-1,j) \\ + \gamma \end{array} , \begin{array}{l} ED(i,j-1) \\ + \gamma \end{array} \right\}$$

return  $ED(n,m)$

# CRYPTOGRAPHY

Each entry requires 3 probes into prior entries.

$ED(n, m)$

# Edit Distance Algorithm

$$ED(0,0) = 0$$

$$ED(i,0) = i \cdot \gamma$$

$$ED(0,j) = j \cdot \gamma$$

Theorem. The Edit Distance DP Algorithm runs in  $O(nm)$  time.

For  $i = 1 \rightarrow n$

For  $j = 1 \rightarrow m$

$$ED(i,j) = \min \left\{ \begin{array}{l} ED(i-1,j-1) \\ + \Delta_{s_i T_j} \end{array} , \begin{array}{l} ED(i-1,j) \\ + \gamma \end{array} , \begin{array}{l} ED(i,j-1) \\ + \gamma \end{array} \right\}$$

return  $ED(n,m)$

Edit Distance  $\equiv$  Sequence Alignment

CRYPTO GRAPH Y  
| | | | | | |  
ENCRYPTING

An alignment is a non-crossing matching.

ED Algorithm computed the distance

Can we compute the alignment?

[illegible]

Treat  
DP Table  
as a  
graph

- entries  $\equiv$  vertices

transitions  
 $\equiv$  edges

# Theorem.

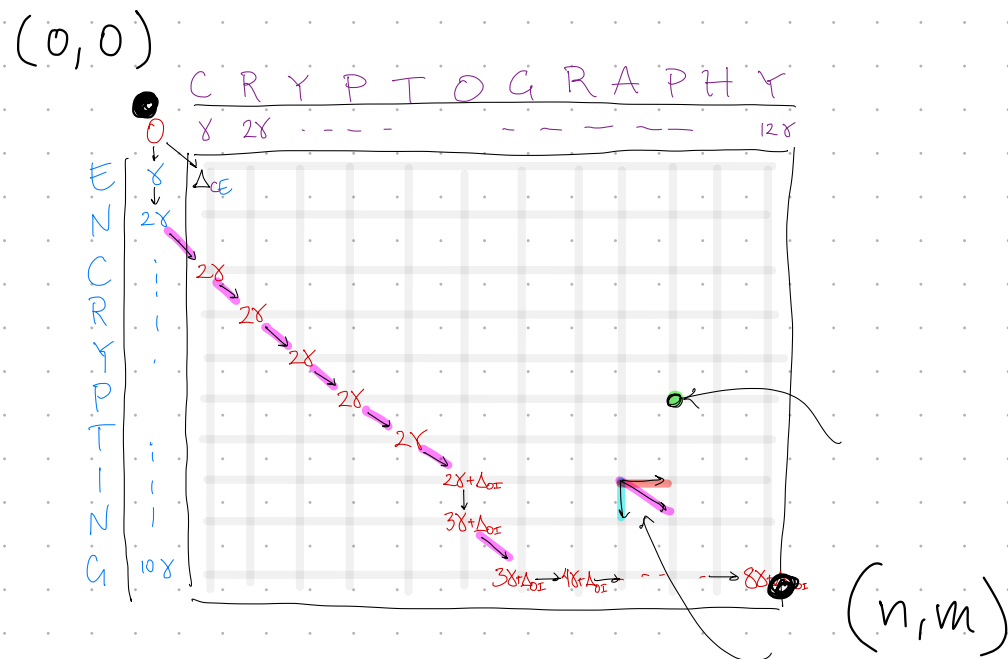

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$

=

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

CRYPTOGRAPHY  
ENCRYPTING

$\Rightarrow$  Can reconstruct alignment via  
diagonal edges.

Fact 3 Every path from  $(0,0)$  to  $(n,m)$  in the ED Graph uses one of three edges:

\*  $(n-1, m) \rightarrow (n, m)$

\*  $(n, m-1) \rightarrow (n, m)$

\*  $(n-1, m-1) \rightarrow (n, m)$

## Theorem.

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$

=

shortest path  
 $(0, 0) \rightsquigarrow (n, m)$   
in ED Graph

---

Proof By induction on  $n+m$ .

\* Two base cases (direct analysis)

\* Inductive Step (based on ED Recurrence & Fact 3)

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0, 0) \rightsquigarrow (n, m)$   
in ED Graph

---

Base Cases       $n+m = 0$  , and  $n+m = 1$

When  $n+m = 0$  ,  $|S| = |T| = 0$  ,

so both strings equal the empty string.

$S = ""$        $T = ""$

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

Base Cases  $n+m = 0$ , and  $n+m = 1$

When  $n+m = 0$ ,  $|S| = |T| = 0$ ,

so both strings equal the empty string.

$S = ""$   $T = ""$

Edit Distance  
between  $""$  and  $""$  = 0 =

shortest path  
 $(0,0) \rightsquigarrow (0,0)$   
in ED Graph

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

Base Cases

$n+m = 0$ , and  $n+m = 1$

When  $n+m = 1$ , then  $|S|=1$  and  $|T|=0$ .  
(or vice versa)

$S = \text{"c"}$   $T = \text{" "}$

$S$  can be turned to  $T$  via one deletion

Edit Distance  
between "c" and "" = 1

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

Base Cases

$n+m = 0$ , and  $n+m = 1$

- \* The vertex  $(1,0)$  has 1 in-edge
- \* from  $(0,0)$  w/ length  $\infty$

$\Rightarrow$

shortest path  
 $(0,0) \rightsquigarrow (1,0)$   
in ED Graph =  $\infty$

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

Base Cases

$n+m = 0$ , and  $n+m = 1$

When  $n+m = 1$ , then  $|S|=1$  and  $|T|=0$ .

Edit Distance  
between " $c$ " and ""

=  $\infty$  =

shortest path  
 $(0,0) \rightsquigarrow (1,0)$   
in ED Graph

$(0,0) \rightsquigarrow (0,1)$  similar

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n, |T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0, 0) \rightsquigarrow (n, m)$   
in ED Graph

### Inductive Step

IH  $\forall i, j$  such that  $i+j \leq n+m$

Edit Distance  
between  $S[1:i]$  and  $T[1:j]$  =

shortest path  
 $(0, 0) \rightsquigarrow (i, j)$   
in ED Graph

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n, |T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

### Inductive Step

First, Recall ED Recurrence.

Edit Distance  
between  $S$  and  $T$  = min

$\delta +$

Edit distance  
between  $S[1:n-1]$  and  $T$

$\delta +$

Edit distance  
between  $S$  and  $T[1:m-1]$

$\Delta_{S_n T_m} +$

Edit distance  
between  $S[1:n-1]$  and  
 $T[1:m-1]$

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n, |T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

### Inductive Step

By Fact 3,  $(n,m)$  has 3 in-edges, so shortest path is the min of in-edge wts + shortest path to neighbor.

Shortest path from  
 $(0,0) \rightsquigarrow (n,m)$

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n, |T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

### Inductive Step

By Fact 3,  $(n,m)$  has 3 in-edges, so shortest path is the min of in-edge wts + shortest path to neighbor.

$$\min \left\{ \begin{array}{l} \delta + \text{Shortest path from } (0,0) \rightsquigarrow (n-1, m) \\ \gamma + \text{Shortest path from } (0,0) \rightsquigarrow (n, m-1) \\ \Delta_{S_n T_m} + \text{Shortest path from } (0,0) \rightsquigarrow (n-1, m-1) \end{array} \right\} = \text{Shortest path from } (0,0) \rightsquigarrow (n, m)$$

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n, |T|=m$ .

Edit Distance  
between  $S$  and  $T$  =

shortest path  
 $(0,0) \rightsquigarrow (n,m)$   
in ED Graph

### Inductive Step

By I.H. Replace ED w/ SP for  $i+j < n+m$

$\delta +$  Edit distance between  $S[1:n-1]$  and  $T$  =  $\delta +$  Shortest path from  $(0,0) \rightsquigarrow (n-1, m)$

$\delta +$  Edit distance between  $S$  and  $T[1:m-1]$  =  $\delta +$  Shortest path from  $(0,0) \rightsquigarrow (n, m-1)$

$\Delta_{S,T} +$  Edit distance between  $S[1:n-1]$  and  $T[1:m-1]$  =  $\Delta_{S,T} +$  Shortest path from  $(0,0) \rightsquigarrow (n-1, m-1)$

$\Rightarrow$   $ED(S, T) = SP(0,0) \rightsquigarrow (n, m)$

## Theorem.

For any  $n, m \in \mathbb{N}$ . Suppose  $|S|=n$ ,  $|T|=m$ .

Edit Distance  
between  $S$  and  $T$

=

shortest path  
 $(0, 0) \rightsquigarrow (n, m)$   
in ED Graph

In other words, Edit Distance reduces  
to single source shortest path.

↳ Bellman-Ford generalizes ED.
